creating online content

it seem simple

you document yourself

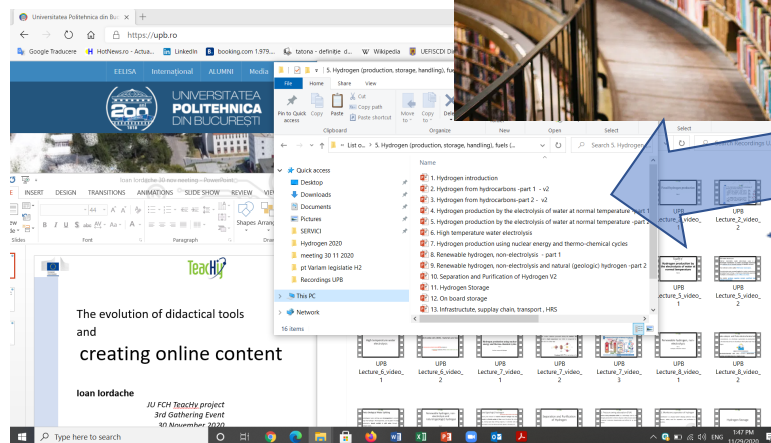

....upload data in

.....your laptop

classic

internet

... the course is ready!

In order to create a didactic content you must understand and know the evolution of the didactic tools.

... is about the evolution from **tablet** to **tablet**

The evolution of didactical tools

in the 19th century

Slate “tablets”

Generations and generations, our grandparents and great-grandparents have learned to read and write on the "tablet." Simple tool, a slate board, in a wooden frame, associated with a stone "pen".

The evolution of didactical tools

real

the 21st century

You are speaking alone us your computers!

- the majority of students open a dark windows with the initials,
- some of them just put up a picture,
- and maybe maybe some of them are **“complete” life.**

Lesson learned when I creating online content

The English is the last problem!, before you start make sure that:

- the laptop is charged or plugged in,

- nobody call you,

- the neighbor does not start the drill, the vacuum cleaner, ...

- if you have the camera on, make sure you have your pants on,

..... and many more

Lesson learned when I creating online content

... after I have start the record or translation from English to Romanian:

- when I start the Zoom, ...I start to made new modifications/improvement for slides,
- when I watched the video (zoom), I did not like them, I made a new one, which of course was much worse,
- when I start to translate in Romanian I found that I do not know how to explain in mine native language!

..... when all was okthe internet is down!

Our role as professors does not change!

....**but** the digitalization means a lot more, instead of assistants or PhD students, we would rather need actors, someone(or more) with a pleasant voice, TV operators, finally a full TV team from Discovery!

What is a pen, notebook or pencil box?
Yes, our generation know!

Thank you for your attention!

.... but how many of us know how to use a quill pen?
